

# Admetec Ergo Series Loupes

*Customizable with a range of magnification options*

Dentists, hygienists, surgeons and other dental practitioners often spend long hours in awkward positions to see fine details. Such strain frequently leads to musculoskeletal disorders. As many as one-third of dentists may retire prematurely because of physical ailments.

Ergonomic loupes combat pain and musculoskeletal disorders by enabling practitioners to maintain a neutral, upright position—eyes relaxed, looking straight ahead—as we naturally do for most of our waking hours. Back, neck and eye strain are reduced, protecting the health and well-being of the practitioner and enabling more efficient work.

Admetec's Ergo series offers an unparalleled combination of magnification potential and user comfort. Customized to each wearer through a

Traditional loupes

Admetec Ergo loupes

multifactor process, the loupes offer precise vision and are very lightweight, which helps dental professionals work more comfortably and effectively for extended periods, maximizing concentration and minimizing physical discomfort.

Admetec's innovative product design results in exceptionally lightweight loupes, even with the largest magnifications. The Ergo's benefits are also progressive: Using them intuitively and subconsciously helps train clinicians to maintain correct head positioning and posture, protecting their health over time.

The loupes are available in six different levels of magnification: 3x, 4x, 5x, 6x, 7.5x and 10x.
